PROFESSIONAL SUMMARY

Java Full-Stack Developer and B.Tech (CSE-IoT) undergraduate with hands-on experience in building Android, web, and IoT applications. A two-time national hackathon winner, proficient in Java, JavaScript, MySQL, REST APIs, and object-oriented programming principles. Possesses strong problem-solving and leadership skills, works effectively in collaborative environments, and is seeking a challenging software development role to apply technical expertise and contribute innovative solutions.

EDUCATION

B.Tech – Computer Science Engineering (IoT)	2023 – Present
Yashwantrao Chavan College of Engineering, Nagpur	
CGPA: 8.57 / 10	
HSC (XII) – Science	2022
Tip Top Convent and High School, Nagpur	
Percentage: 84.5%	
SSC (X)	2020
South Point School, Nagpur	
Percentage: 95.6%	

TECHNICAL SKILLS

Backend	Java (Core, OOP, Collections, JDBC)
Frontend	HTML5, CSS3, JavaScript , Bootstrap, Flutter, Android (XML)
Databases	MySQL, PostgreSQL, Firebase Firestore (CRUD, schema design)
Languages	Java, Python, C++, JavaScript, Dart
Tools	Git, GitHub, Firebase, Arduino IDE, Android Studio, Cisco Packet Tracer
Core CS	OOP, DSA, DBMS, REST APIs, MVC architecture, Cloud computing basics

EXPERIENCE

Technology Intern – Deloitte (Virtual Internship)	July 2025
Completed, Remote	
- Engineered Python ETL pipeline to normalize IIoT data across 3 incompatible sensor formats, eliminating manual reconciliation and reducing data ingestion errors for downstream analytics. - Authored full software design specification for a real-time industrial monitoring dashboard — covering system architecture, REST API contracts, and relational database schema.	
Web Developer Intern – IBM (Fundamentals of Web Development)	Aug 2025 – Oct 2025
Completed, Remote	
- Completed structured curriculum in HTML5, CSS3, Bootstrap, and JavaScript; built 3 responsive web pages applying mobile-first design and cross-browser compatibility best practices. - Applied RESTful API consumption patterns in JavaScript to dynamically render data, strengthening practical full-stack integration skills.	

PROJECTS

1. VetNxt – Smart Animal HMIS & IoT Collar System

Nov 2025

Tech: Java, Firebase REST API, ESP32, DS18B20, ADXL345, SIM800L, Android | **National One Health Hackathon 2025 – Winner**

- Built full-stack Animal HMIS: Java-based Android app consumed Firebase REST APIs to display real-time telemetry from 50+ ESP32 smart collars monitoring body temperature and activity.
- Implemented OOP-based alert engine triggering GSM notifications within 2 seconds of anomaly detection; structured Firebase Firestore schema to support CRUD operations under concurrent IoT load.
- Integrated cloud-based analytics with structured data schema, demonstrating practical database design under production-level IoT data throughput.

2. Jeevan Setu – Wildlife Intrusion Detection System

Oct 2025

Tech: ESP32, RFID, UV Sensor, ML, Android (XML), Firebase, Alert Systems | **National Hackathon – Winner**

- Architected fail-safe ESP32-based perimeter system integrating RFID, UV sensors, and ML-enabled camera triggers; delivered real-time XML push alerts to Android app and village buzzers for rapid response.
- Designed modular Android (XML) frontend with MVC-aligned separation of concerns, consuming REST endpoint data for live intrusion event display.

3. SakhiSafe – Women’s Emergency Safety App

Sep 2025

Tech: Flutter, Firebase, Google Maps API, Twilio (SMS/WhatsApp), REST APIs

- Developed cross-platform emergency safety app integrating Google Maps REST API for live location sharing and Twilio API for instant SMS/WhatsApp alerts to registered contacts.
- Optimized async API call chain reducing SOS trigger-to-notification latency to under 3 seconds; implemented structured Firebase data model supporting concurrent multi-user alert sessions.

4. Customer Data Manager – Business CRM Desktop App

Aug 2025

Tech: Java (Swing, Advanced GUI), JDBC, MySQL, SQL

- Designed and deployed Java Swing desktop application with MySQL backend; implemented full CRUD operations via JDBC handling 500+ customer records with role-based access control.
- Applied OOP principles (encapsulation, inheritance, abstraction) across data model, UI layer, and database access layer — demonstrating clean MVC-style separation of concerns.

ACHIEVEMENTS

- **Winner** – National One Health Hackathon 2025 (VetNxt project) (Represented West Zone Of India)
- **Winner** – National Hackathon organized by Tadoba Andhari Tiger Reserve, held at BIT Ballarpur
- **Finalist** in 3+ national hackathons; 8+ hackathon participations across IoT, AI, and full-stack tracks
- **Shortlisted** – Smart India Hackathon (2024 & 2025)

CERTIFICATIONS & TRAINING

- Deloitte Virtual Technology Internship – IIoT, Python, Software Design | Completed July 2025.
- IBM SkillsBuild – Fundamentals of Web Development (HTML5, CSS3, Bootstrap, JavaScript) | Completed Oct 2025.
- Infosys Springboard – UNIX & LINUX OS Fundamentals Training | Completed Oct 2025.
- IBM – SQL Course | Coursera | Completed Nov 2025.
- NPTEL Certification - Community Engagement and Social Responsibility.
